

## FIBOX CUSTOMISING SERVICES

**MACHINING SERVICE:** Fibox employs state-of-the-art machines to manufacture your custom-made enclosures with drills, knockouts, or openings – even for small piece numbers.

**ASSEMBLY SERVICE:** Have you ordered hinges, inspection windows or other Fibox accessories? Do you know our assembly service can deliver your enclosure and accessories pre-assembled and ready for use? This cuts down your labour costs and time to delivery.

**TOOL MODIFICATIONS FOR OEM ENCLOSURES:** Instead of having to manufacture a whole new tool Fibox can modify our own standard tools according to your OEM enclosure specification. This results in a shorter product development time and enables you to take your product to market earlier. Modifications of our standard tools give you a possibility to differentiate your products from your competitors.

**COLOURED ENCLOSURES:** Paint your enclosures in your corporate colour. Fibox offers customers a choice of custom or RAL colour for plastic enclosures, even for relatively small quantities.

**LACQUERED ENCLOSURES:** Fibox provides a lacquer coating for your enclosures on request. This process is especially recommended for production quantities of under 500 pieces. We offer a comprehensive range of lacquer options.

**EMC PROTECTION FOR ENCLOSURES:** Fibox can provide your plastic enclosure with EMC protection if desired. For example, we can apply a conductive copper coating to the inside faces or utilise a special conductive gasket.... or both.

**PRINTED ENCLOSURES:** Fibox can supply your enclosures with silk screen printing to your specification. Smooth, even surfaces are required.
