

The Merit Sensor Blood Pressure sensor is ideal for low cost, high-volume, disposable medical applications including blood pressure monitoring. The BP Series sensor is temperature compensated, dielectric gel protected and can easily be installed into a customer's pressure device housing.

COMPANY: Merit Sensor is a leader in piezoresistive pressure sensing and partners with clients to create high performing solutions for a variety of applications and industries. Design, engineering and manufacturing of Merit Sensor products takes place in state-of-the-art wafer fabrication facility in Utah, US.

TECHNOLOGY: Merit Sensor utilizes a piezoresistive Wheatstone bridge with a chemically etched silicon diaphragm. All products are RoHS compliant.

CAPABILITIES: Merit Sensor designs, engineers, fabricates, dices, assembles, tests and sells and services die and packaged products from a state-of-the-art facility near Salt Lake City, Utah.

FEATURES

- Pressure range of -30 to 300 mmHg
- Excellent burst pressure
- Compliant with AAMI BP22 specifications
- Dielectric gel barrier
- Fully tested
- Small, disposable, low-cost package
- Temperature compensated
- Solid state piezoresistive sensor
- Top side pressure entry
- Easy to install into customer's disposable blood pressure device housing
- Compatible with automated assembly equipment
- Compatible in air, gas and liquid
- Shipped as 120UP snapstrates or on tape and reel
- Automated testing and assembly
- Custom options available
- Engineering, design, and manufacturing under one roof in Utah, USA.

APPLICATIONS

- Disposable blood pressure measurement
- Kidney dialysis machines
- Infusion pumps
- Surgical procedures

NOTES:

1. Assumes 6 VDC, 22°C and after five second warm-up unless otherwise specified.
2. Output of sensor with no pressure applied and a 150 KΩ resistor shorted across + IN to + OUT.
3. Over a temperature range of 15°C to 40°C.
4. Normalized offset/bridge voltage – 8 hours after 20 second warm-up.
5. Previously qualified, not tested in production.
6. Combined effect of sensitivity, repeatability, nonlinearity and hysteresis errors.
7. Sterilization performed by customer.

NOTE:

- When sensors are shipped as 120UP snapstrates, the ceramic plates must be singulated by the customer.
- Each plate may include units that have failed electrical or visual test. Bad units are identified with a red dot on the backside of the unit.
- Plates are shipped in dust free anti-static containers to prevent damage to the gel.
