

**Ultra-low TCR, Low Thermal EMF**  
**High-Precision Shunt Based Current Sensing Module**

# SRES6918

Nominal Resistance	<b>100<math>\mu\Omega</math></b>
Initial Resistance Tolerance	<b><math>\pm 0.1\%</math></b>
Tolerance over Full Temperature Range	<b><math>\pm 0.3\%</math></b>
Maximum TCR	<b><math>\pm 5\text{ppm}/^\circ\text{C}</math></b>
Thermal EMF	<b><math>\leq 0.6\mu\text{V}/^\circ\text{C}</math></b>
Rated Current	<b><math>\pm 400\text{A}</math></b>

## Applications

Electric Vehicles / Construction Machinery  
Agricultural Machinery / eVTOL / Energy Storage / Charging Stations  
Power Metering / Precision Power Supply

### Ultra-low TCR, Low Thermal EMF High Measurement Accuracy, Low Resistance, High Current

#### Introduction

The SRES6918 series ultra-low resistance shunts, designed for precise measurement of kiloamp-level currents. Through proprietary alloy manufacturing and optimized sensing structure, a maximum TCR of  $\pm 5$  ppm/ $^{\circ}\text{C}$  is achieved, with typical values as low as  $\pm 2$  ppm/ $^{\circ}\text{C}$ . Thermal EMF is reduced to  $\leq 0.6$   $\mu\text{V}/^{\circ}\text{C}$  through precise alloy and customized heat treatment. Initial resistance tolerance is better than  $\pm 0.1\%$ , enabling high-precision sensing without complex TCR compensation. This significantly reduces application and calibration costs.

The module integrates a shunt and PCBA, and can be mounted via bolts in the circuit. Applicable to bus current and shunt temperature and outputs signals to the signal processing module.

#### Electrical Parameters

Resistance	Initial Resistance Tolerance <sup>[1]</sup>	Tolerance over Full Temperature Range <sup>[2]</sup>	TCR	Rated Current	Thermal EMF	Inductance	Operating Temperature
100 $\mu\Omega$ $\pm 5\%$	$\pm 0.1\%$	$\pm 0.3\%$	$\pm 5$ ppm/ $^{\circ}\text{C}$ (+20~+125 $^{\circ}\text{C}$ , 25 Ref)	$\pm 400\text{A}$	$\leq 0.6$ $\mu\text{V}/^{\circ}\text{C}$	$\leq 3$ nH	-40~+125 $^{\circ}\text{C}$

[1]. Scan the QR Code to get the initial resistance of shunt, at lab environment of +25 $^{\circ}\text{C}$   $\pm 2^{\circ}\text{C}$ .

[2]. Resistance tolerance over the full temperature range, -40~+125 $^{\circ}\text{C}$ , is referenced to the initial resistance value.

#### NTC

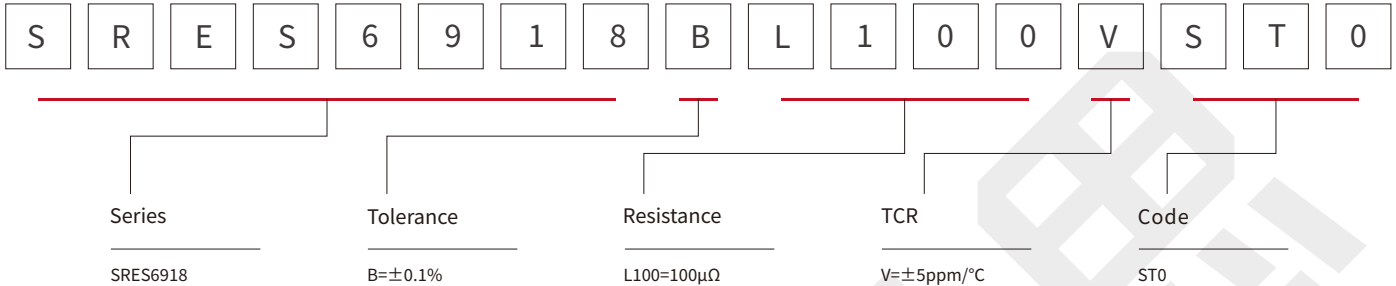

Resistance	Tolerance	TCR	Operating Temperature Range
10K $\Omega$	$\pm 1.0\%$	-3380 ppm/K (25/50 $^{\circ}\text{C}$ )	-50~+150 $^{\circ}\text{C}$

#### Mechanical Dimensions

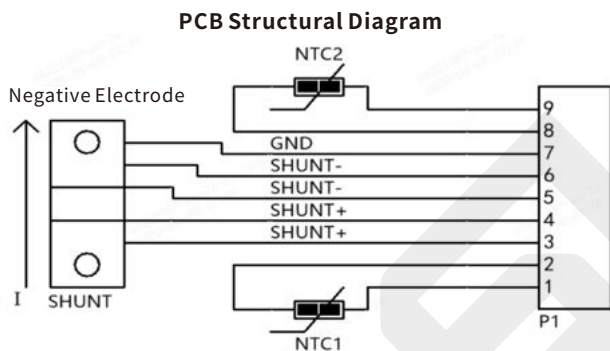

### Part Number Information

Example: SRES6918BL100VST0 (SRES6918  $\pm 0.1\%$  100  $\mu\Omega$   $\pm 5$  ppm/ $^{\circ}\text{C}$  Standard)

### Electrical Principle

Connector Diagram

Connector Part Number: 2008WRS-1x09-9TNB05RR02CQ

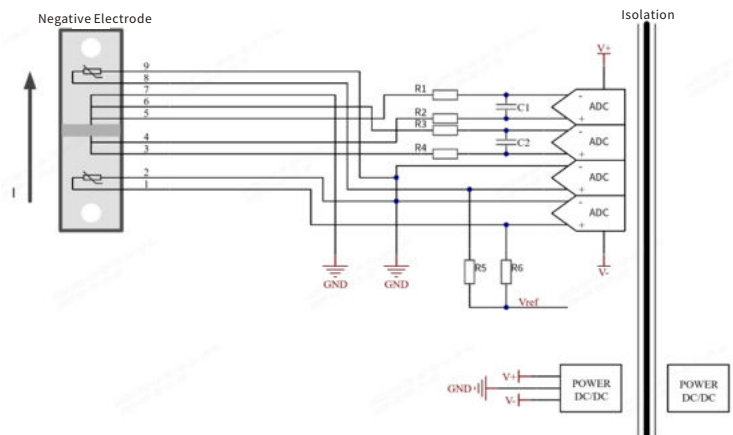

Pin No.	Code & Description
Pin 1	TL1 Left Temperature Sensor Pin 1
Pin 2	TL2 Left Temperature Sensor Pin 2
Pin 3	SB+ Current Signal Group B Positive
Pin 4	SA+ Current Signal Group A Positive
Pin 5	SA- Current Signal Group A Negative
Pin 6	SB- Current Signal Group B Negative
Pin 7	COM Shunt Common Terminal
Pin 8	TR1 Right Temperature Sensor Pin 1
Pin 9	TR2 Right Temperature Sensor Pin 2

- The current direction depends on the installation position of the product within the BDU and is not related to the SRES6918 module.
- The current direction indicated in the diagram defines the polarity of the pins.
- According to the recommended current direction in the PCB structural diagram, battery discharge is generally defined as positive, while charging is defined as negative.
- The current sensing channels of Group A and Group B are designed as redundant channels and can be used interchangeably.
- Recommend Pin 4 and Pin 5 as twisted pair. Pin 3 and Pin 6 as twisted pair.

### Typical Application

The module is designed for precise current measurement at critical nodes of the system. It integrates a high-power shunt and temperature sensors (NTC), and can be easily integrated with backend circuitry as a front-end signal acquisition device.

The module incorporates a high-power shunt resistor for real-time current measurement, while integrated temperature sensors are used to monitor the shunt temperature, enabling continuous monitor of the system operating temperature. The module interface provides two independent current sensing channels and two temperature sensing channels. The two current sensing groups are designed with redundancy and can be used interchangeably. Similarly, the two temperature sensing channels are implemented as redundant paths, both supporting temperature measurement via a voltage divider method. Both current and temperature sensing signals are routed through a common connector. It is recommended to perform sensing on the same side of the system. Sampling across high side and low side of an isolated system is not recommended due to potential measurement inconsistencies. The sensing signals can be routed via a wiring harness and acquired through backend ADC channels. The overall system typically consists of three main elements: the sensing module, the wiring harness, and the circuit.

Remark:

- In a simplified design, only one current sensing channel and one temperature sensing channel may be used, without redundancy.
- In general applications, resistor (R) and capacitor (C) values can be selected according to the recommended table, or adjusted based on actual requirements.

Component	R1, R2, R3, R4	R5, R6	C1, C2
Specifications	20 $\Omega$	20K $\Omega$ 0.1%	1nF

### Performance Specifications

Test	Test Method	Standards	Acceptance Criteria
Electrical Characteristics	Measured at -40°C, 0°C, 85°C, 125°C, and 25°C (25°C as reference)	User Specifications MIL-STD-202H Method 304	Resistance value and TCR shall remain within specified limits. Tolerance shall meet $\geq 1.33$ Cpk capability
Insulation Resistance	1000 V DC, Duration: 60 s	MIL-STD-202H Method 302	Insulation resistance $\geq 10$ MΩ No visible damage, arcing, or breakdown $\Delta R/R \leq \pm 0.25\%$
Dielectric Strength	1000 V AC, 500V/s, Duration: 3 s	MIL-STD-202H Method 301	Leakage current $< 2$ mA No visible damage, arcing, or breakdown $\Delta R/R \leq \pm 0.25\%$
Short-Time Overload	5 × rated power, 5 s, natural convection (no forced airflow)	GB/T 7676.8-2017 5.5.3.2	No visible damage $\Delta R/R \leq \pm 0.5\%$
Low Temperature Storage	-40°C, Duration: 96 h	IEC 60068-2-1:2025	No visible damage $\Delta R/R \leq \pm 1\%$
High Temperature Storage	+125°C, Duration: 2000h	IEC 60068-2-2:2025 MIL-STD-202H Method 108	No visible damage $\Delta R/R \leq \pm 1\%$
Thermal Shock	125°C / -40°C, 15 min dwell (30 min if $> 28$ g), $\leq 30$ s transfer, 1000 cycles	IEC 60068-2-14:2023 Test Na	No visible damage $\Delta R/R \leq \pm 1\%$
Bias Humidity	85°C, 85% RH, 1000 h, 10% rated power	MIL-STD-202H Method 103	No visible damage $\Delta R/R \leq \pm 1\%$
Load Life	125°C (terminal), 2000 h, rated power loaded	MIL-STD-202H Method 108	No visible damage $\Delta R/R \leq \pm 1\%$
Mechanical Vibration	10–1000 Hz, 8 h/axis, 27.1 m/s <sup>2</sup> RMS	ISO 16750-3:2023 4.1.8 IEC 60068-2-64	No functional mechanical damage No component failure $\Delta R/R \leq \pm 0.5\%$
Mechanical Shock	50 g, 6 ms pulse width, 10 shocks per axis (X±, Y±, Z±)	ISO 16750-3:2023 4.2.2	No functional mechanical damage No component failure $\Delta R/R \leq \pm 0.5\%$
Free Drop	Concrete floor or steel plate, 1m, 3 samples, 2 drops per sample	ISO 16750-3:2023 4.3	$\Delta R/R \leq \pm 0.5\%$
Visual Inspection	Visual inspection or optical inspection with suitable magnification	MIL-STD-883L Method 2009.14	No marking defects, burrs, scratches, deformation, or soldering defects No component failure
Dimensions	Full dimensional measurement per product specification	JESD22-B100B	Complies with product datasheet specifications
Weight	Measured using a precision electronic balance	Product Datasheet	Complies with product datasheet specifications
Flatness	Measured using a height gauge or profilometer at electrical connection area	Product Datasheet	Complies with product datasheet specifications

### Construction

### Marking

Part Number	Illustration	Laser QR Code	Example
SRES6918BL100VST0		Data Matrix Size: 5*5mm, Total Characters Digits: 22	Number: 2026032000001R049.8395 Decoded Information: Date: March 20, 2026; Module ID: 00001; Initial Resistance: 49.8395 $\mu\Omega$

### Copper Bar Connection

1. Recommended busbar material: T2 copper
2. Recommended busbar dimensions: Width: 25 mm, Thickness: 3 mm; Single-side length greater than 20 mm. The busbar should be positioned as far as possible from the shunt resistor and the wiring harness heat sources.
3. Recommended bolt: M8
4. Recommended tightening torque: 15–20 N·m
5. Do not use a flat washer between the copper bar and the shunt
6. Keep the surfaces of the shunt and copper bar clean and free of scratches

### Storage

1. Recommended storage at room temperature
2. The storage environment shall be clean, dry, and free of harmful gases. The packaging must be protected from direct sunlight
3. Anti-static wrist straps or gloves should be worn during installation, storage, and handling
4. Avoid mechanical impact during handling

### Packaging

Package Element	L	W	H
Carton	509	342	240
EPE Tray	496	328	61
Tray Cover	495	325	5
Anti-static Bag	900	510
