

Rhpoint Components is committed to the protection of our environment and takes the necessary steps to meet the challenges of new regulatory requirements as soon as they arise. We will work with our customers, suppliers and industry peers to identify and install compatible processes that ensure smooth transition to new technologies.

The RoHS (Restriction of Hazardous Substances) directive 2011/65/EU is an EU directive aimed at reducing the harmful environmental impact of waste electrical equipment by restricting the use of known dangerous substances. As of 1st July 2006, new electrical and electronic equipment introduced into the market and falling into certain product categories (with some exemptions) may no longer contain the following chemicals above specified maximum concentration levels:

- Lead
- Cadmium
- Mercury
- Hexavalent Chromium
- Polybrominated Biphenyls (PBB)
- Polybrominated Diphenylethers (PBDE)

Although RoHS is a European Union (EU) Directive, manufacturers of EEE outside Europe must also abide by this legislation if the equipment they produce is ultimately imported into an EU member state.

As a sales agent of electronic components we obtain and rely on the product manufacturer to provide information for RoHS compliance.

Rhpoint Components' policy is only to designate a product as RoHS compliant when we are confident that the product is fully compliant. We use simple RoHS compliance symbol designation on our web site and the meaning of these designations are as follows:

Product does not contain the substances restricted by the RoHS legislation at levels over the maximum concentration values. Product is available fully RoHS compliant.

Product is available as RoHS compliant, but may not be RoHS process compatible with high temperatures used for reflow soldering due to internal solder.

Product is not currently RoHS compliant but its future status may change.

Product qualifies for one of the specific exemptions set out in the Annex to the RoHS Directive.

No RoHS Designation.

Products outside the scope of the RoHS legislation and products for which we do not have enough information from our suppliers to confidently confirm their RoHS compliance status have no designation on our web site.

In case of further questions regarding the implementation of the RoHS regulation in our company, please do not hesitate to contact us.

Signed on behalf of Rhpoint Components Limited.

Adam Stanger
Group Quality Manager - Rhpoint Components Limited.
