

DC. Capacitor (HI - K)

DC. 陶瓷電容器 2類 (高介電常數型)

■ 產品外觀圖 Outline Drawing

■ 用途 :

適用於作旁路，耦合或用在對損耗和電容量穩定性要求不高的電路中具高介電常數的一種電容器。該類陶瓷介質是以在類別溫度範圍內電容量非線性變化來表徵。

■ Applications:

For use in bypass, coupling or use on losses and capacitance stability requirement is not high in the circuit with high dielectric constant of a capacitor. This kind of ceramic dielectric is in the category temperature range to manifestations of nonlinear capacitance change.
